

INNOVATIVE. SOLUTIONS. DELIVERED.

“Sunflower Assets enables you to quickly assemble, distribute and manage the equipment, tools and supplies you need to recover from a disaster.”

WHEN DISASTER STRIKES, WILL YOU BE READY?

When disaster strikes, your ability to identify, mobilize and deploy your assets may quite literally be the difference between life and death. You need assurance that you can quickly assemble, distribute and manage the equipment, tools and supplies you need to strike back and get back on track. You need Sunflower Assets.

Identify and Deploy Assets to the Disaster Site

Knowing what equipment and supplies you have and where they are becomes even more critical in an emergency. The Sunflower Assets system can be up and running quickly and accessed by multiple groups immediately regardless of physical location, enabling you to easily track your assets from anywhere around the globe. Sunflower Assets provides the flexibility to manage all the items you need for emergency response – construction and communications equipment, vehicles, and materials and supplies that can be distributed to facilities or people. You will be able to identify what tools, equipment and supplies are currently in your inventory, what condition they are in, who is responsible for them and where they are located, allowing you to quickly assemble and deploy them to the emergency site.

Manage Assets at the Disaster Site

In the midst of a disaster, your IT infrastructure may be damaged or inaccessible, impeding your ability to communicate with your enterprise IT systems. Sunflower offers mobile solutions to transact on data in the field using hand-held devices or remote instances of the Sunflower Assets software, enabling you to maintain operational continuity throughout the disaster response effort. You can track your assets, issue materials and update asset information directly from the mobile applications. Information collected and managed on the remote devices can be uploaded back into your Sunflower database to capture all transactions and information entered at the emergency site. This remote capability provides the assurance that you know where your assets are at all times and how they are being employed in the disaster management effort.

Address Damaged and Destroyed Assets

During a crisis, there will likely be structural damage to real property assets and the personal property housed within the structure may also be lost, damaged or destroyed (LDD). Being able to quickly identify impacted assets - where they were located, what they were worth, how they were being utilized - will facilitate your ability to retire and manage LDD equipment. With Sunflower, you can easily identify the buildings and personal property assets impacted by the disaster and assess the total dollar value of the damage. Sunflower also provides the ability to complete mass retirements of damaged or destroyed assets and document the appropriate disposition activities. Finally, you can use the detailed asset record data in Sunflower to evaluate the type, status and value of all damaged and destroyed assets, which will enable you to create an acquisition strategy for replacement assets.

Sunflower’s comprehensive asset management solutions allow you to remain prepared when **any** disaster strikes. Sunflower can help you prepare for and respond to emergency situations, from quickly identifying and distributing assets and supplies needed at a disaster site, to managing the emergency response equipment and efficiently dealing with the aftermath so you can return to full-strength operation.
