## SUNFLOWER SYSTEMS CONTINUES PREPARATION FOR FUTURE TECHNOLOGY ADVANCES

*The move to Java 2 Platform, Enterprise Edition will offer customers a choice of application server platforms for deployment of Sunflower Systems software.*

**ARLINGTON, Virginia, July, 2008** – Sunflower Systems, the leading provider of asset management solutions and software, announces its intent to enhance its software applications using the Java 2, Enterprise Edition (J2EE) platform in the next several years. The conversion to J2EE will provide greater interoperability with other J2EE applications and offer Sunflower customers a wider choice of application server platforms. The redesigned Sunflower application will be able to run on popular application servers such as WebLogic, JBoss, WebSphere, and Oracle.

Sunflower has not yet determined a specific date for completion of the J2EE conversion, but any impending changes will be announced to customers well in advance of the release date.

Jeffrey Polyak, Vice President of Solutions at Sunflower states, “Software technologies are always changing. As an Oracle partner, Sunflower will be prepared well in advance of the Oracle shift away from the Oracle Forms technology. As progress is made on the enhancement of our software, Sunflower will work directly with our customers to ensure a smooth transition to any new technology choices our customers would like to make.”

### **About Sunflower Systems**

Sunflower Systems is an asset management solutions company specializing in the deployment of software tools and business processes to simplify asset management tasks.
