SUNFLOWER SYSTEMS LAUNCHES NEW MAINTENANCE SOLUTION

The new maintenance solution will help property managers to efficiently track maintenance or calibration of property items.

ARLINGTON, Virginia, May, 2008 – Sunflower Systems, the leading provider of asset management solutions and software, announces the release of the Sunflower Maintenance Solution that will enable users to manage preventative maintenance schedules, record emergency maintenance transactions and keep track of calibration status. Certain types of property such as vehicles and scientific lab equipment require ongoing maintenance and calibration respectively. Sunflower’s new solution will enable increased organization of these necessary processes and provide a fully auditable history record of when tasks were completed.

The Sunflower Maintenance solution will provide organizations the ability to establish preventative maintenance or calibration schedules, set-up automated notifications, and record meter readings to determine how much an item has been used. Managers can assess the condition in which an asset is performing, create work orders for scheduled and unscheduled repairs, and capture statistics such as cost and frequency of maintenance activities by type and cause.

Jeff Polyak, VP Solutions at Sunflower states that, “providing a simple solution to record maintenance history of assets will provide managers with valuable information to make better business decisions around the procurement, utilization and inventory of their assets.”

About Sunflower Systems

Sunflower Systems is an asset management solutions company specializing in the deployment of software tools and business processes to simplify asset management tasks.
