SUNFLOWER SYSTEMS PROVIDES ENHANCED MATERIAL MANAGEMENT SOLUTION

The enhanced Material Management solution offers property managers increased functionality to help manage stock rooms and non-serialized assets.

ARLINGTON, Virginia. March, 2008 – Sunflower Systems, the leading provider of asset management solutions and software, announces the release of an enhanced Material Management solution. This improved solution provides simple intuitive forms that give property organizations the ability to manage shelf- life, minimum and maximum on-hand quantities, re-order points and provides users with increased email and system notifications. This solution is an enhanced feature of Sunflower Assets®, the company’s core software solution for asset management activities. Material items can be tracked based upon a specific location, government contract, organization accountability and other attributes.

The Material functionality was developed in response to client requirements around better management of non-serialized assets. With the Material Management solution, customers can confidently track material in Sunflower with the security and accountability that they have enjoyed with their tagged property.

Julie Feldman, Customer Solutions Manager at Sunflower states, “The Material solution was developed in response to our client’s request for additional functionality to track non-bar-coded property items. We are pleased to be able to offer this added benefit to our customers. We value our ability to deliver when one of our customers provides feedback on our software and identifies functionality that would improve their business. With over 60 customers and a development team that is larger than many of our competitors, Sunflower customers are ensured comprehensive solutions for changing needs.”

About Sunflower Systems
