SUNFLOWER SYSTEMS LAUNCHES NEW VERSION OF MOBILETRAK HANDHELD SCANNING SOLUTION

MobileTrak 4.6 helps simplify the physical inventory process and streamlines the receiving process by capturing item information on a mobile device in the field.

ARLINGTON, Virginia, July, 2007 – Sunflower Systems™, the leading provider of asset management solutions and software, announces the release of MobileTrak 4.6. MobileTrak enables faster and more accurate physical inventory results by capturing asset information on a handheld scanner and uploading the information directly to your asset management system. Multiple identifiers such as a linear barcode, 2-D Matrix, and RFID can be associated to individual assets in the field.

MobileTrak is simple to use. Assets are scanned when they are acquired or when inventories need to be completed. The asset data is then uploaded into Sunflower Assets® where asset information is stored and managed. Inventory progress can be tracked and missing assets can be identified and accounted for. Inventory or receiving information becomes part of an asset's permanent record and can be easily recalled to support reconciliation activities.

Sunflower Systems has partnered with Intermec and Psion Technologies to provide their customers with the latest mobile scanners such as the Intermec 741B, 751G and Psion Workabout Pro.

“The new features included in this version are the direct result of feedback from our customers. I can't thank our customers enough for their active participation in the development of this release. With fifth generation features and technology, MobileTrak 4.6 is a world class application that will help increase physical accountability of assets in over 100 countries worldwide.” claims Jeff Polyak, VP of Solutions at Sunflower Systems.

About Sunflower Systems
