SUNFLOWER RELEASES ASSET MAPPING SOLUTION

ARLINGTON, VA – Sunflower Systems®, the leader in enterprise asset management software and solutions, announces Sunflower Asset Mapping, a new solution which allows organizations to leverage the information stored in Sunflower to produce visual representations of locations and the assets contained within. The latest visualization tools can reduce time and increase operational efficiency by providing the ability to quickly view data in multiple formats.

Sunflower Asset Mapping functionality gives organizations the ability to visualize their asset data in a way unique to their office, warehouse, or building, and by enabling them to view each asset on maps specific to their organization. Assets can be queried and viewed on maps of various levels, from a specific building floor plan to a higher-level geographical map. When an asset location is changed via a transaction in Sunflower, the corresponding graphical location change is automatically reflected on the map in real-time. This effective display of asset data helps organizations improve distribution times, save costs and reduce risk of loss.

By producing a visual representation of assets, Sunflower can now save the time and money involved in locating assets by providing asset managers with visual location information, inventory technicians with a portable map for their inventory and auditors with a visual response to their questions. “This tool gives asset managers the ability to visualize their assets in a way never before possible,” says Jeff Polyak, Senior Vice President of Solutions. “Assets are visually presented on an easily readable map, further simplifying physical inventory and location management business processes.”

About Sunflower Systems

Sunflower Systems is an enterprise asset management solutions company specializing in the deployment of software tools and business processes to simplify asset management tasks. Sunflower’s portfolio of solutions enables organizations to improve decision-making, accountability and regulatory compliance for all types of assets including personal property, real property, IT assets, materials, vehicles and more.
