

## **Sunflower Systems' Enterprise Asset Management Announces Solutions for Mobile Asset Management**

*Sunflower Systems, the leading provider of enterprise asset management software, has developed a suite of mobile solutions to assist organizations with mobile asset management processes including asset receiving, asset disposal, shipments, and performing physical inventories. The mobile solutions enable property managers to update assets as they move from any location with the use of a handheld scanner.*

Sunflower Systems now offers a suite of mobile solutions to help organizations manage their assets as they move--from any place, at any time--with the use of a handheld scanner. Sunflower MobileTrak, ExcessTrak and PackTrak address organizations' most pressing mobile asset management challenges.

Sunflower MobileTrak enables property managers to quickly and accurately create asset records from a central receiving location, so that assets are created at the time of receipt. MobileTrak also simplifies the physical inventory process by allowing property managers to scan assets, create assets, mass transfer assets and update asset information while in the field.

Sunflower ExcessTrak allows property staff to update assets as they move throughout the excess process. Excess personnel can scan assets at the time of pickup and subsequent delivery to a warehouse so that an electronic record is created for each movement. Once at a central disposal location, assets can be managed as they move within a warehouse and grouped into lots to expedite the disposal process.

Sunflower PackTrak assists in the shipment of items and allows for updates to be made to assets as the move through the shipping process. Asset information can be scanned at the time of shipment and delivery including shipping container details, carrier, place of origination and destination.

"Our assets are constantly on the move in order to fulfill our organizational missions," says Jeffrey Polyak, Senior Vice President of Solutions at Sunflower Systems. "Property managers face the challenge of keeping tabs on these assets as they move, and our suite of mobile solutions enables them to do that quickly and effectively, while increasing data accuracy and auditability."

### **About Sunflower Systems:**

Sunflower Systems provides full lifecycle asset management solutions. Sunflower provides asset management services and enterprise asset management software to multiple industries including federal agencies, state and local agencies, government contractors, universities, national laboratories, and private corporations. Sunflower's portfolio of solutions enables organizations to improve decision-making, accountability and regulatory compliance for all types of assets including personal property, real property, IT assets, materials, vehicles and more.
